Q. when do you feel most fortunate in your life? A. When I feel that I am the best of the best in myself. And that I can help the best of the best. Q. What you are you preparing for your next books? A. Rishi Kalyan's Phoolon Ke Sanghat: I have an in mind to write a book on Rishi of the Phoolon ke Sanghat sect of the Vaishnava tradition. It has a special significance for me, and I am

---

glad I have the opportunity to write it now. Q. If you have any rituals that you look forward to doing in December, please let us know. A. There is a traditional rituals known as Kirtan Shri Shringar Puja. I do it on the 1st Shraavana in November every year. And it is said that the Chhath Puja will be a better one when Lord Shri Chhote Patelanath Shri Narayana Patelanath Hanuman & Sri Kalki avatar comes, so I am looking forward to it. Q. Do you read any of the books written by late Sudhir Kakar? A. Yes, I do. I have read several of the books of late Sudhir Kakar. I read his books when I started writing my own books. And I enjoyed his books. And now I am reading them again after I have started to write my own books. The use of genetically engineered mice to model human diseases is critical to the overall success of biomedical research. To date, most disease-associated genes have been identified by positional cloning, a method that is time consuming and expensive. Recently, the full-sib mating and the F2 intercross strategies were used to map both spontaneous and chemically induced mutations. These strategies were shown to be faster and more efficient than positional cloning. Although this approach has been used to successfully map over 100 mouse mutations, the nature of the inheritance can obscure the effect of mutations, particularly in the case of recessive mutations.

Moreover, the majority of the mouse mutations generated are homozygous lethal. This makes the mapping of recessive mutations difficult or impossible. Thus, the use of F2 intercross mice for the mapping of recessive mutations is still limited.

Using a breeding scheme based on F2 intercrosses between C3H/He and C57Bl/ 82157476af
